

## *Welcome to DocSykes Psycho-educational Resources*

# SHARING iDE&S

## **information - Direct, Explicit & Systematic**

**Notes, Checklists, References, Psycho-educational Strategies in Special Education, Gifted Education, Reading, Spelling, Written Expression, Mathematics, Studying and Behaviour and Parenting Education**

The material has been organised in 16 Sections and contains three types of detailed information-

### **Basic Definitions, Conceptual Frameworks, Notes and References**

This material will provide practitioners with clear and concise definitions, conceptual frameworks, notes and references that will assist in forming the rationale for the selection of educational and instructional approaches and other intervention strategies.

### **Checklists**

These informal checklists, which are basically diagnostic in nature, should enable practitioners to identify significant developmental, psychological and educational needs in students and assist in the selection of appropriate educational and instructional strategies and psychological interventions.

### **Psychological and Educational Strategies and Interventions**

These strategies and interventions, both psychological and educational, are a central component of my psycho-educational reports and have been found to be helpful in supplementing the approaches and methods used by teachers and psychologists with students with special needs. Relevant resources including texts and computer software are highlighted.
